1 ABOUT THIS DOCUMENT

1.1 Characters and Symbols

The following characters and symbols are used in this Help function:

Symbol	Designation	Meaning
	Hint	Hints for an easier or better approach
	Note	Basic information on a specific procedure
 1. 2.	Action	Instructions for an action consisting of only one step. Instructions for an action consisting of several steps are numbered
	Prerequisite	Prerequisite must be fulfilled
	Result	Result of an action

1.2 Highlighted Passages

Keyboard shortcuts appear in the text as follows: **STRG + C**. The corresponding shortcut for keyboards with English keys appears in brackets (**CTRL+C**).

Software dialog elements are shown as follows: **Tab** or **Window** or **Menu entry**.

Software buttons are shown as follows: **OK**.

2 GEBERIT BIM CATALOGUE PLUG-IN

The **Geberit** BIM Catalogue plug-in has been developed specifically for Autodesk® Revit®.

This plug-in provides the Revit® user with a component library of **Geberit** products for their project planning.

The data is called up directly from the **Geberit** PIM system and imported into Revit®.

3 TECHNICAL PREREQUISITES

The following technical prerequisites are necessary for the installation of the plug-in.

They apply for the plug-in version 1.0.0.

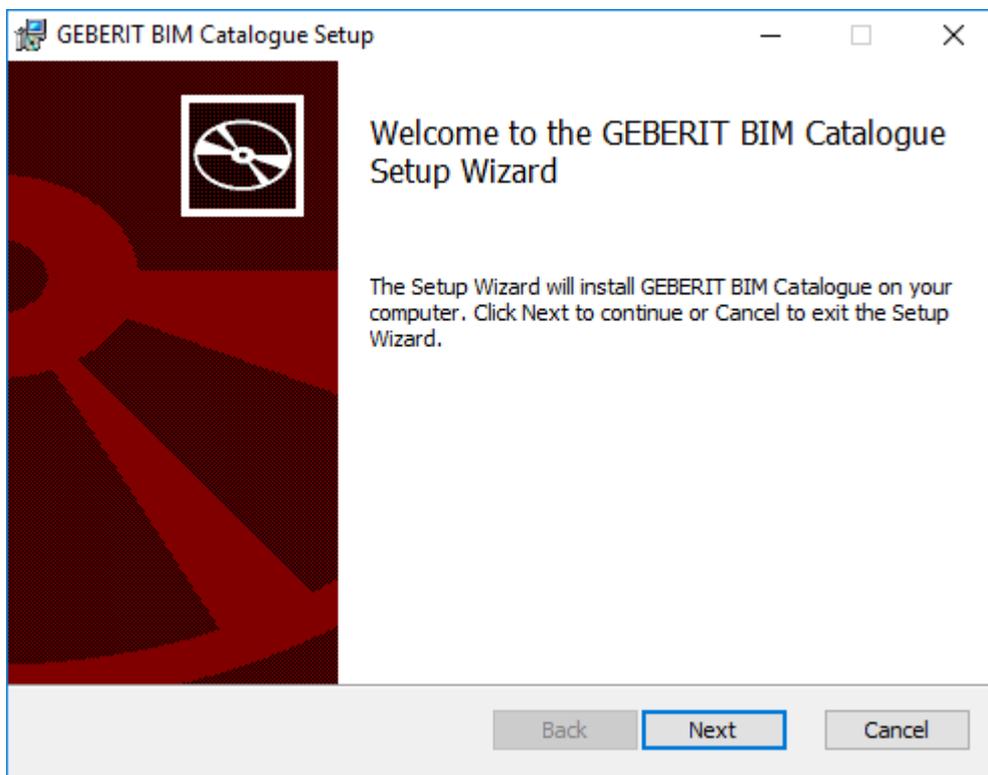

Operating system:	Windows 10
Autodesk® Revit® version:	2018.3 or higher / 2019 / 2020 / 2021

4 INSTALLATION

Administrator rights for the PC are required for the installation of the plug-in.

1. Call up the following page in the browser and download the **Geberit** BIM Catalogue plug-in:
www.geberit.co.uk/bim.
2. Unzip the downloaded zip file.
3. Double-click on the **Setup.exe** installation file
 - ✓ The installation wizard starts.

4. Follow the instructions on the display.

5 OPERATION

5.1 Selecting regional settings

Before you can search for **Geberit** products in Autodesk® Revit® and insert them in your BIM project, you need to define regional settings. These settings are used to select the available products in the **Geberit** product range of the selected country.

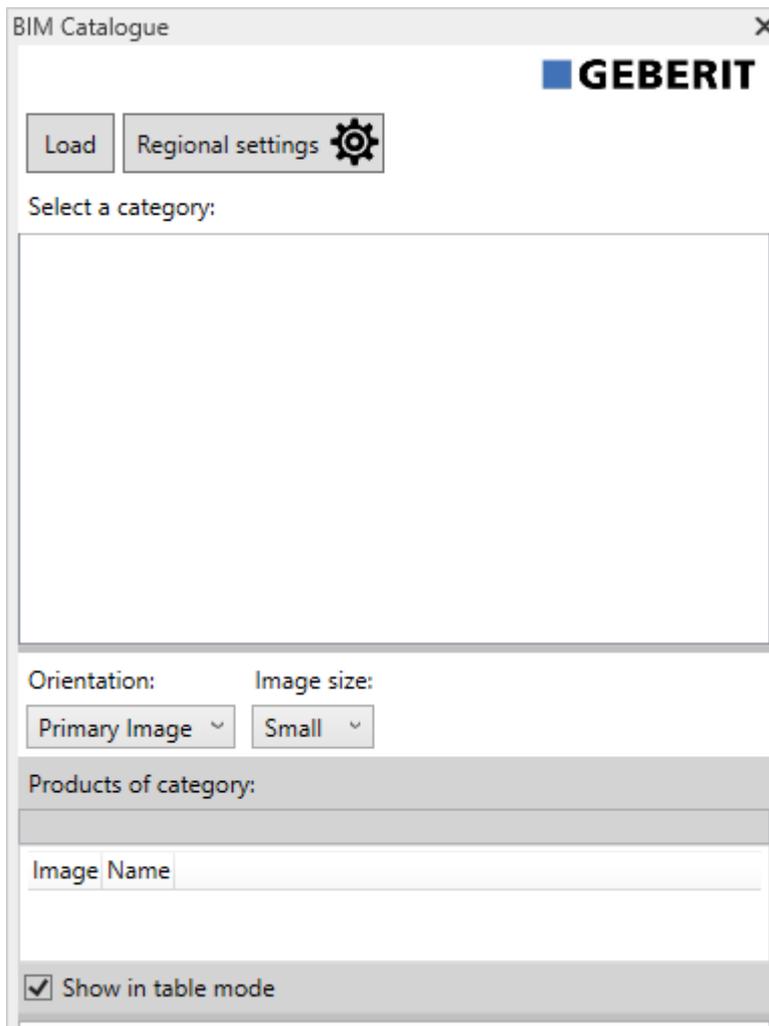

Geberit recommends that the regional settings within a project are not changed.

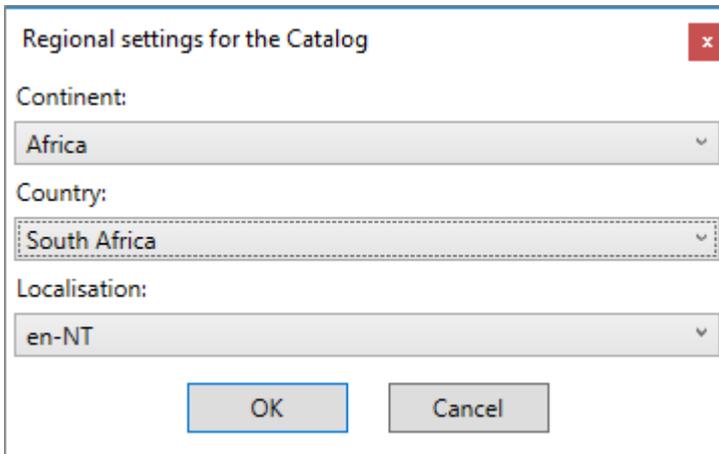

1. Click on the **Add-Ins** tab in the Autodesk® Revit® menu bar.

2. Click on **BIM Catalogue**.
✓ The **BIM Catalogue** window appears.

3. Click on **Regional settings**.
✓ The **Regional settings** window appears.

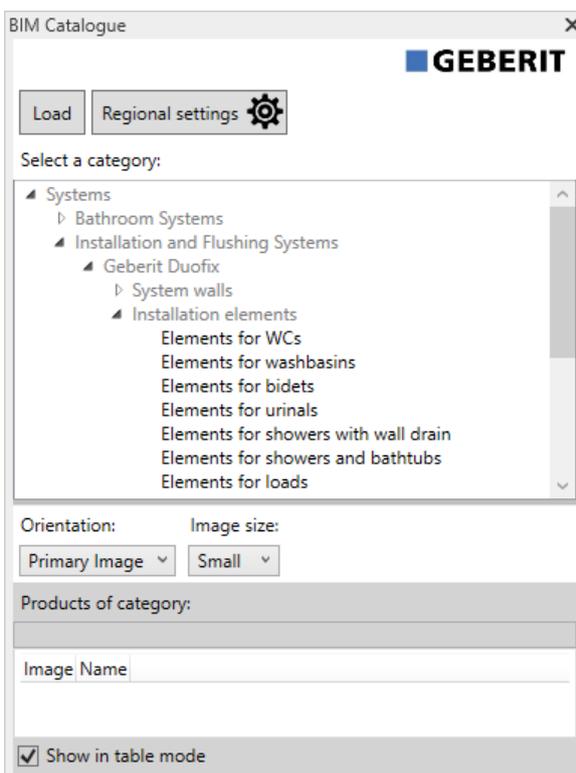

4. Select the **Continent**, **Country** and **Localisation**.
5. Click on **OK** to confirm the setting.
6. Click on **Load** in the **BIM Catalogue** window to load the available product range of the selected country.

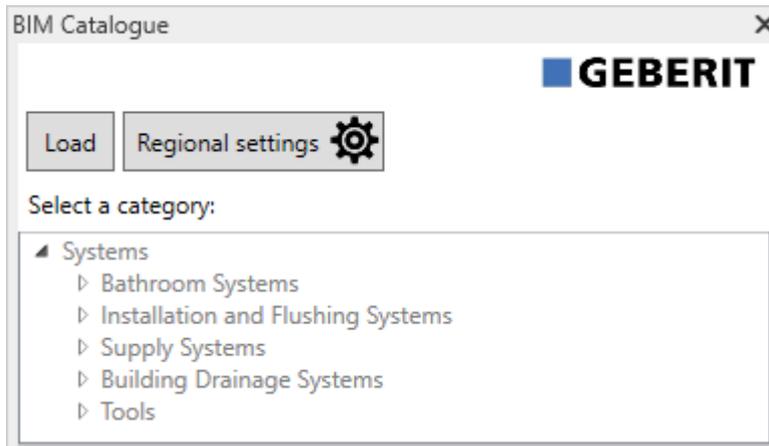

5.2 Selecting products

All of the products available in the product range are listed in a tree structure. The tree structure corresponds to the structure in the online catalogue of the respective country.

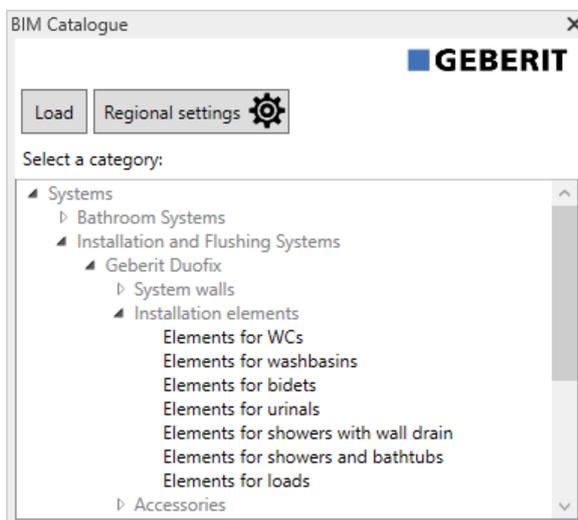

Product categories are shown in grey in the tree structure and selectable product groups are shown in black.

1. Click on the triangle (▸) in the tree structure to open the **Systems** entry.

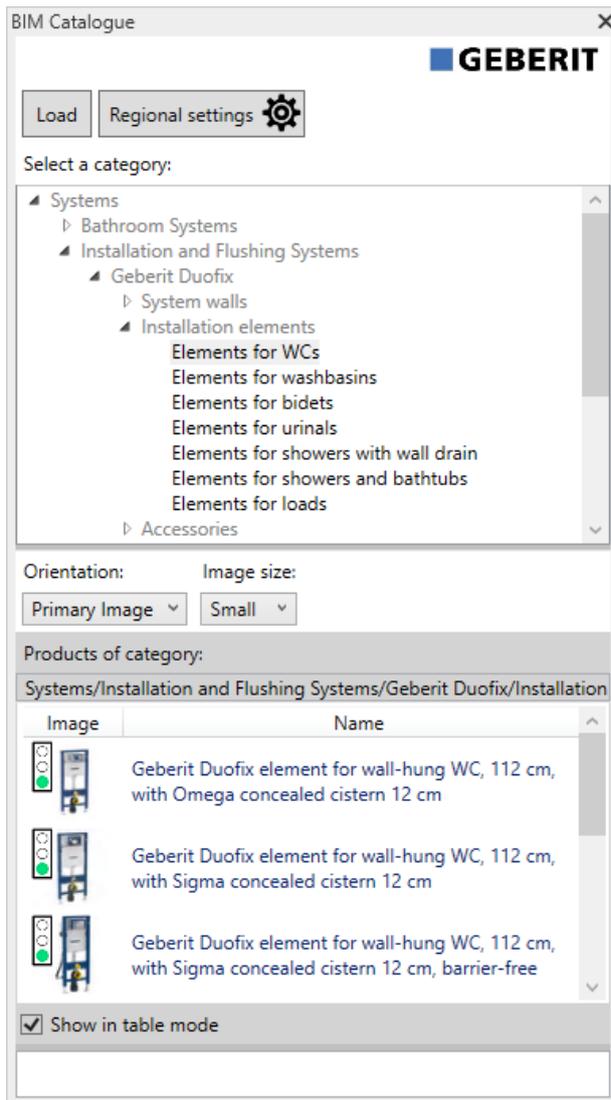

2. Open the desired product category in the same way and navigate to the desired product group.

- ✓ The available products in the **Products of category** area appear as soon as you have marked a product group.

5 Operation
5.2 Selecting products

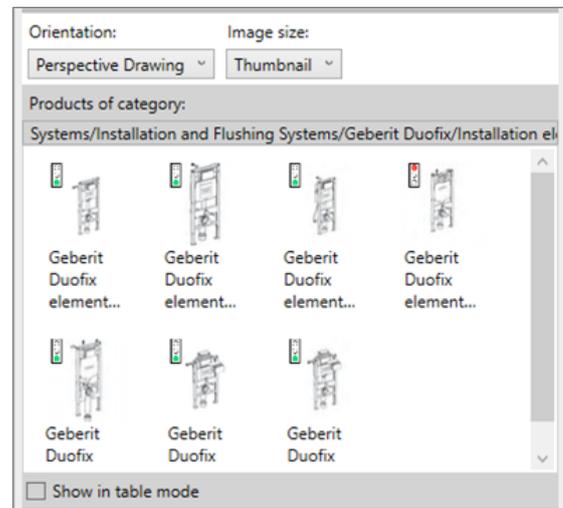

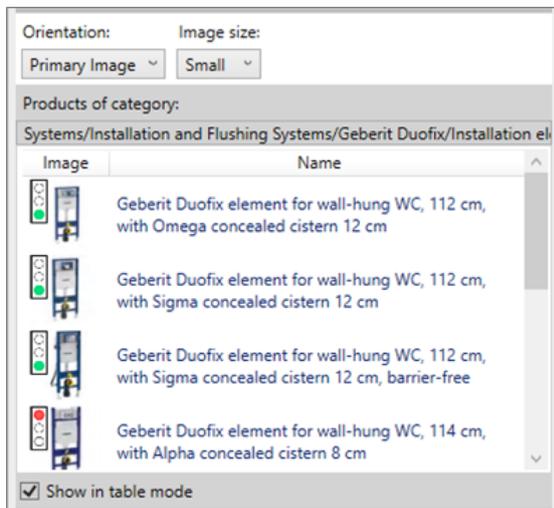

The traffic light in the **Image** column indicates whether the product is BIM-ready and whether a Revit® family is available to download.

Symbol	Description
	The product is BIM-ready and can be used. A Revit® family is available.
	The product is BIM-relevant but cannot be used because a Revit® family is not yet available.
	The product is not relevant for the digital planning or the product has been recently added to the product range.

If necessary, you can customise the view in the **Products of category** area (see "Customising view in the Products of category area", page 11).

5.3 Customising view in the Products of category area

The products in the **Products of category** area are shown as standard as a table and with the respective product photo. If necessary, you can customise this view using the **Orientation** and **Image size** selection fields as well as by activating or deactivating the **Show in table mode** checkbox.

5.4 Inserting products

1. Double-click on the desired product in the **Products of category** area.
 - ✓ All BIM-ready products are downloaded from the **Geberit PIM** system.
2. Click on the desired position in your BIM project to insert the product.

If you add a pipe from the supply systems area or building drainage systems, the most important fittings required for the routing presettings are loaded as well.

5.5 Anonymising product information

Public sector tenders usually require manufacturer-neutral planning. The plug-in allows you to switch between neutral (LOD300) or manufacturer-related product information (LOD400).

1. Mark one instance of a product in your BIM project.
2. Click on **Edit Type** in the **Properties** window.
 - ✓ The **Type Properties** window appears.
3. Activate **LOD300** in the **Identity Data** area.
 - ✓ Information, such as **Article number**, **Manufacturer**, **Model** and **Description** is replaced by neutral information in all available instances of the product.

Identity Data		⬆
Article number	n/a	
Assembly Code		
Cost		
Description	concealed cistern support frame for toilet	
Keynote		
LOD300	<input checked="" type="checkbox"/>	
LOD400	<input type="checkbox"/>	
Manufacturer	generic	
Model	-	
Type Comments		
Type Image		
URL		
Assembly Description		
Type Mark		
OmniClass Number	23.45.05.21.11.11	
OmniClass Title	Water Operated Water Closets	
Code Name		

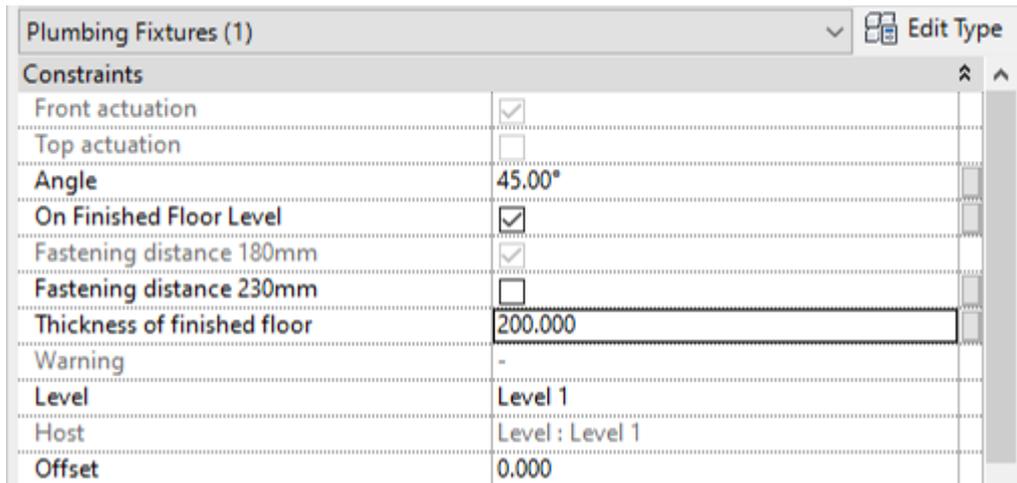

4. Click on **OK** to confirm the setting.

5.6 Setting height offset for installation elements

The **Geberit** Duofix installation elements can be aligned vertically using height-adjustable leg supports. A height offset of 0–20 cm can be balanced out in the floor construction.

The plug-in allows you to set this height offset individually for each instance of a product.

1. Mark one instance or several instances of a Duofix element in your BIM project.
2. Navigate to the parameter **Thickness of finished floor** in the **Constraints** area in the **Properties** window.

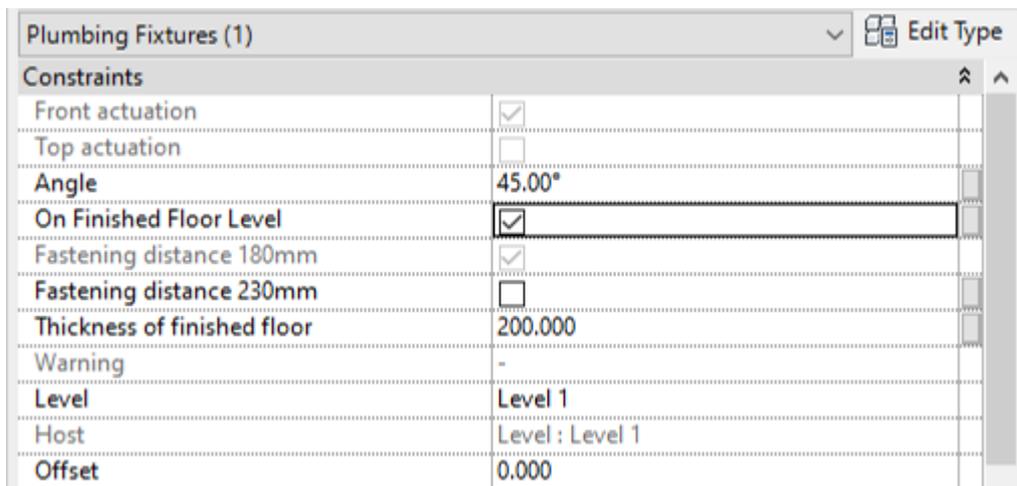

3. Enter the desired value for the height offset in [mm].
4. Click on **Apply** to apply the settings.

5.7 Setting reference plane for height offset

The information in the reference plane is important so that your BIM project correctly implements the height offset of the **Geberit** Duofix installation elements.

The reference plane can be the unfinished floor or the finished floor.

1. Mark one instance or several instances of a Duofix element in your BIM project.
2. Navigate to the **Constraints** area in the **Properties** window.
3. Activate the **On Finished Floor Level** checkbox.
 - ✓ The finished floor reference plane is activated.

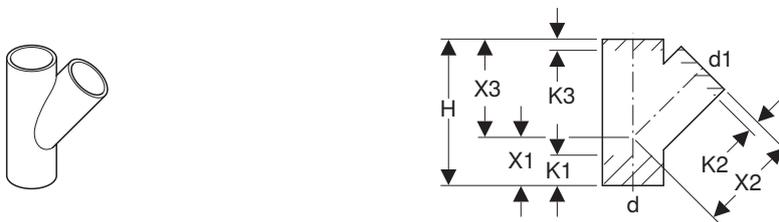

4. Click on **Apply** to apply the settings.

5.8 Shorten fittings

Mounting and installation situations on the construction site require the shortening of fittings. All fittings for **Geberit** building drainage systems that can be shortened have a shortening dimension K that indicates the maximum admissible shortening per connection.

The values for the maximum shortening of each fitting can be viewed in both the **Geberit** online and printed catalogue.

The maximum permissible shortening dimension per connection can be viewed in the **Dimensions** area in the **Properties** window.

[Properties help](#) Apply

1. Mark one instance of a fitting in your BIM project.

5 Operation

5.9 Take the welding loss on fittings into account

2. Navigate to the parameters **Max cutting length at connection 01** in the **Constraints** area in the **Properties** window.
3. Enter a value between 0 and the maximum permissible shortening dimension for each connection to be shortened.
4. Click on **Apply** to apply the settings.

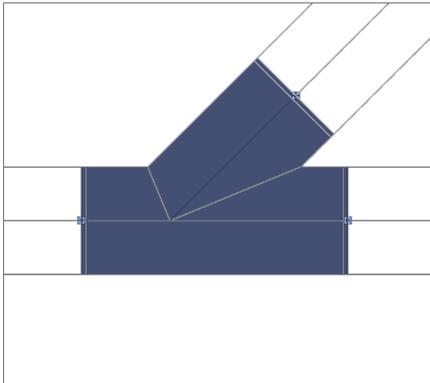

Result

- ✓ The leg length of the fitting is adjusted in your BIM project.

5.9 Take the welding loss on fittings into account

Part of the material melts when welding plastic pipes and fittings. This material loss is referred to as the welding loss. The welding loss must be taken into account in the calculation and therefore in the planning of drainage systems.

In the plug-in, taking the welding loss into account causes the connection points of the fitting to be offset internally in the BIM project, thus representing the area of the welding loss. The effective length of the pipes is also adjusted.

1. Mark one instance of a fitting in your BIM project.
2. Navigate to the parameters **Weld loss at connection 01** in the **Constraints** area in the **Properties** window.

Properties

Size	100 mmø-100 mmø-90 mmø

[Properties help](#) Apply

3. Activate the checkbox for each connection on which a welding loss should be taken into account.
4. Click on **Apply** to apply the settings.

5.10 Distinguish between fittings with the same nominal width

There are fittings in the **Geberit** product range for Mapress Copper and Mapress Carbon Steel whose assigned articles have the same nominal width DN 65.

Table 1: Example of product articles with the same nominal widths DN 65

Article no.	DN	d [mm]	L [cm]	Z [cm]
20112	65	66.7	14.1	9.1
20109	65	76.1	15.9	10.6

If such a fitting is used in a BIM project, the article with the smaller outer diameter is inserted as standard.

[Properties help](#) Apply

5.11 Map the thread to the nominal width

The connections of pipes and fittings are realised in Revit® with the nominal width DN. For fittings connected to a pipe by means of a threaded connection, the thread dimensions are stated in inches. It is recommended that the unit of length is shown with 3 decimal places to ensure that the conversion results in Revit® are correct.

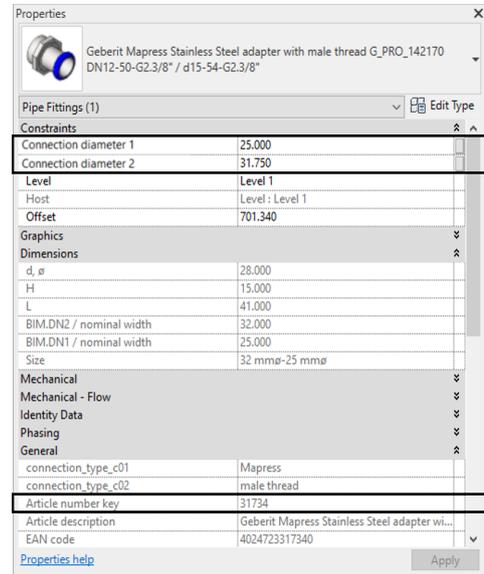

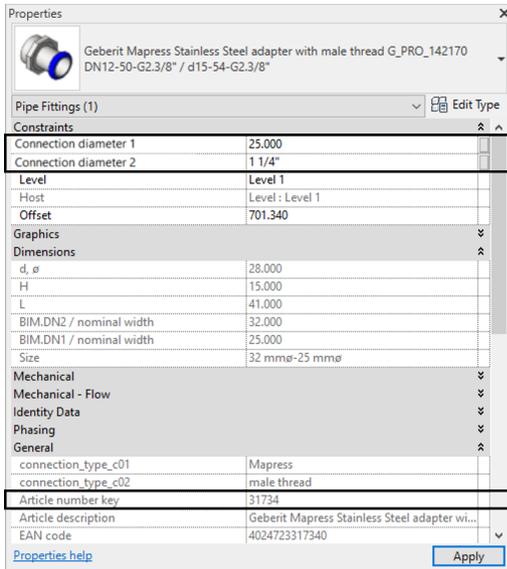

1. Click on the **Manage** tab in the Autodesk® Revit® menu bar.
2. Click on **Project Units**.

- ✓ The **Units** window appears.
3. Click on the **Length** unit in the **Format** column.
 - ✓ The **Format** window appears.
 4. Click on the **Rounding** selection list and select the value **3 decimal places**.
 5. Click on **OK** to apply the settings.

6. Navigate to the parameter **Connection diameter 2** in the **Constraints** area in the **Properties** window.
7. Enter the connection value of the fitting in inches according to the online catalogue.
 - ✓ The conversion is made with 3 decimal places and results in the correct mapping on the correct **Geberit** article.

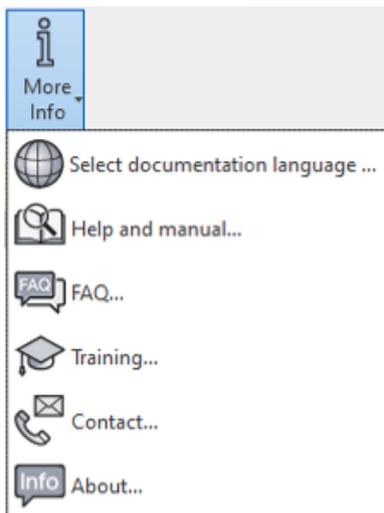

6 ADDITIONAL INFORMATION
